Membership Guide

Your Red Light Reset Membership Guide

Everything you need to know about your RLT membership — how it works, what to expect, and how to get the most out of every session.

Sessions: Up to 12 per month

Period: 30-day rolling

THE BASICS

What Is Red Light Therapy?

Red Light Therapy (RLT) uses specific wavelengths of light to support your body at the cellular level.

Our panels deliver 660nm red light and 850nm near-infrared light. Red light (660nm) is absorbed by cells near the surface — supporting collagen production and skin health. Near-infrared light (850nm) penetrates deeper into tissue — reaching muscles, joints, and bones to support recovery and reduce inflammation. Together, these wavelengths boost cellular energy production (ATP), helping your body repair and regenerate more efficiently.

YOUR PLAN

Your RLT Membership

Frequent, consistent sessions are the key to getting results with red light therapy.

Up to 12 Sessions / Month

Your membership includes up to 12 in-clinic RLT sessions per 30-day rolling period. We recommend 2-3 sessions per week for optimal results.

30-Day Rolling Period

Your membership renews every 30 days from your start date. Sessions reset each period — unused sessions do not roll over.

YOUR VISIT

What to Expect

Each session is quick, relaxing, and requires zero downtime.

1. **Check In**
   Arrive at the clinic and check in with our team. We'll get you set up in the red light room.

2. **Position at the Panels**
   Stand or sit in front of the red light panels. Expose the target area directly to the light for maximum absorption — clothing blocks the wavelengths.

3. **20-Minute Session**

Relax while the panels deliver therapeutic wavelengths. The light feels warm but comfortable — no UV exposure, no burning.

4 **You're Done**

Get dressed and go about your day. No recovery time needed — many people do RLT sessions during lunch breaks or before/after workouts.

TIPS

Getting the Most Out of RLT

Expose Skin Directly

Red and near-infrared light can't penetrate clothing. For the best results, expose the target area directly to the panels.

Aim for 2-3 Sessions Per Week

Consistency matters more than duration. Regular sessions throughout the week deliver better cumulative results than sporadic longer sessions.

Stay Hydrated

Proper hydration supports the cellular processes that red light therapy activates. Drink water before and after your session.

Combine with HBOT

Red light therapy pairs well with Hyperbaric Oxygen Therapy. Many members do both in the same visit for compounding benefits.

SAFETY

Important Safety Information

Contraindications:

- ✕ Photosensitivity medications (tetracycline, doxycycline, etc.)
- ✕ Active skin cancer or lesions in the treatment area
- ✕ History of epilepsy or seizures triggered by light
- ✕ Pregnancy (as a precaution)

Possible Side Effects:

- Mild warmth or tingling in the treated area
- Temporary skin redness (resolves within hours)
- Occasional mild headache

Side effects are generally mild and short-lived. RLT uses no UV light and does not cause burns or skin damage. If you experience anything unusual, let our team know.

Questions? We're Here.

Whether you need to schedule a session or have questions about your membership, our team can help.
