

INJURY RECOVERY.

When time and rehab aren't enough.

You're doing the work — the exercises, the stretches, the ice. But your body still isn't healing the way you expected. Sometimes recovery needs support from the inside, too.

WHO THIS IS FOR

- You're dealing with a sprain, strain, or overuse injury.
- You have a tendon or ligament issue that won't resolve.
- You're recovering from surgery and want to heal faster.
- You have chronic pain that keeps coming back.
- Your injury is healing too slowly and you want more options.
- You've been referred by a physical therapist or chiropractor.

HOW RANGE MEDICAL + RANGE SPORTS THERAPY WORK TOGETHER

Range Sports Therapy focuses on hands-on care, movement, and rehab.

Range Medical focuses on what's happening inside your body — healing, inflammation, and recovery. Both are in the same building, and we often share patients. The goal: support your body from the inside and outside at the same time.

YOUR RECOVERY PATH

- 1. Range Assessment.** We review your injury, your goals, and your current care.
- 2. Plan with your providers.** We coordinate with your Range Sports Therapy team so everyone is aligned.
- 3. Recovery tools.** Your plan may include peptides, PRP, exosomes, IVs, red light, or hyperbaric oxygen.
- 4. Track progress.** We check in and adjust as you heal.

RECOVERY TOOLS WE MAY USE

- **Peptide Therapy** — may help your body's natural repair process.
- **PRP & Exosomes** — concentrated treatments applied to the injury area.
- **IV Therapy** — nutrients delivered directly to help your body recover.
- **Red Light Therapy** — may help reduce inflammation and support healing.
- **Hyperbaric Oxygen** — higher-pressure oxygen that may support tissue healing.

*We do **not** replace your PT or chiro work — we support it.*
